

CRISCO
For Frying—For Shortening
For Cake Making

is the rich, solid
cream of the oil

Crisco is an entirely different cooking fat. You never have used anything like Crisco for frying, for shortening or for cake making because the Crisco Process of treating vegetable oil is new. And only this process can make the Crisco, or cream, from the oil.

Cream represents the richest, or best, of the milk. Crisco represents the richest, yet most digestible form of food oil.

Crisco is different also in this respect: It remains sweet and pure indefinitely. For the parts of the oil which turn rancid are eliminated by the Crisco Process.

Do not confuse Crisco, therefore, with other cooking fats. Crisco possesses advantages which none other has.

None is of the high quality of Crisco; no more than milk is of the quality of cream.

Try Crisco yourself, for frying, for hot biscuits and for cake. You will be delighted with it. You will see in an instant why it is so different. And you then will insist that your cook use Crisco.
